

CAD-CUT® Metallic Heat Transfer Vinyl

Foil like finish with a soft feel

The easiest way to get the look of foil in one easy step. It gives apparel the softest stretchiest feel and the trendy metallic look your customers want.

GREAT FOR:

- 1-step application
- Finely detailed designs
- Application on stretchy & heat sensitive fabrics

QUICK, 1-STEP APPLICATION

Not only is the 1-step application quicker than a foil + adhesive application. Metallic heat transfer vinyl eliminates the foil pinholes common on cotton shirts when using foil.

FINELY DETAILED DESIGNS

Create even the most intricate designs with fine details. A pressure sensitive carrier makes weeding easy, without lifting or moving designs off the carrier.

SOFT ON STRETCHY & HEAT SENSITIVE FABRICS

Metallic Heat Transfer vinyl gets softer, with a brushed metallic look when laundered. It applies at 285°F so it's a good option for application on heat sensitive and stretchy fabrics.
