Cast Slideable Graphic Media

Product Guide

Gruv Slideable

Designed for speed and ease of application, the new product features a highly conformable 2.0 mil gloss white cast vinyl. The film is coated on one side with a low initial tack and permanent gray block-out acrylic adhesive that is slideable and repositionable. A primer is used to enhance the adhesive anchorage to the film for clean removability. It offers superior performance on complex curves, recesses, and riveted surfaces. The slideable and repositionable adhesive comes with a 90# polycoated micro-channel, air-egress liner. The micro-channels imparted into the adhesive allow a bubble-free installation without showing through the film.

Features and Benefits

- Full or partial wraps on vehicles, fleets, buses, recreational vehicles, watercraft, and trailers
- Designed for ease of use and application speed, the slideable and repositionable adhesive comes with a 90# polycoated micro-channel, air-egress liner
- The micro-channels imparted into the adhesive allow a bubble-free installation without showing through the film
- It can be used for long-term outdoor signage and other applications that require conformability and durability
- Compatible with wide-format solvent, latex, and UV-curable inkjet printers and can be sheeted for UV offset and screen printing
- Covered by Mactac Open Image WarrantySM.

Durability

- Film durability up to 10 years for unprinted, no overlaminate and applied to a vertical, flat surface.
- Use-life estimate based on accelerated age studies on vertical applications under "normal" environmental conditions.
- Severe environmental conditions will reduce life expectancy.
- Recommendations are believed to be accurate but do not constitute a warranty written or implied.
