

Solvent-Based Laminates for Water-Sensitive Ink/Media

ClearJet® is an inexpensive way to protect your prints, fine art, signs, banner, photographic output, awnings and other products. It is an easy to apply clear coating that does not require extensive equipment. ClearJet is available in quarts and gallons in addition to our easy-to-use ClearJet aerosol spray cans.

Benefits

- **State of the art UV inhibitors**
- **Chemicals & water resistant**
- **Protects from abrasion and marring**
- **Non-Yellowing**
- **Enhances Color**
- **Cost Effective**

Formulations

- **ClearJet Original (A2000)**
 - For standard applications
- **ClearJet Fine Art**
 - Formulated to penetrate the canvas making the ink/media combination more flexible. ClearJet Fine Art does not cause discoloration or color shifts and does not react with the ink jet receptive layer of most fine art canvases.

As the digital printing industry grows and more inks and media types are introduced, it is impossible to lab test our laminates on every ink/media combination. We strongly recommend that you test ClearJet on your ink/media combination before use. We are also happy to test your ink/media combination in-house for you if you provide Marabu with printed samples.

Compatibility

Compatible Substrates Include

- Canvas
- Banners
- Wood
- Paper
- Vinyl
- Fiberglass
- Plastic
